AD Normandie, a regional agency for economic development in Normandy:

AD Normandie is the regional agency for economic development in Normandy that assists foreign companies to set up their business in Normandy as well as to develop their business potential.

The invest team provides tailor made solutions to the specific needs of foreign investors (business development, innovation, process management, mobilization of financial aids and other incentives...).

The agency offers 3 mains services to foreign companies:

- **A single window for all regional grants and aids:** Our team helps you to formalize your project and to identify solutions, especially for project finance, and effective project implementation.
- **A regional investment fund Normandie Participations:** Normandie Participations is a regional structure, working with AD Normandie, for equity participation in companies.
- **An access to regional partners:** in partnership with the actors of economic development, we set up projects, organize events for developing business links and networks, dissemination of good practices and information for the benefit of companies in Normandy.

Activity

Fastpoint has developed a «Wifi as a Service» product line, which includes the VOD (Video On Demand) over Wifi service for transport and hotels. It is a startup of the Orange group, created at the end of 2016. It has offices in Caen and Cherbourg and employs 4 people.

Market

The company targets partners and customers in the btob markets, particularly in the transport markets: rail operators, ferries and cruise ships. Fastpoint rents a wifi telecom infrastructure as well as VOD services as a complement. The product makes it possible to bring on board these transports a VOD service, magazines on demand to one-off purchases or subscription packages for passengers and customers. The product works thanks to specific terminals developed by the company, but also mobile apps, captive portals also developed by the company.

What do you expect from the Consumer Electronic Show?

Fastpoint came as a visitor last year in order to discover the CES and to meet potential clients. In 2019, Fastpoint will attend the CES as an exhibitor and will be accompanied by its technical director (security expert at the back office level) in order to get more visibility than last year. It's CEO wants to create connections with Norman, French and international executives. For the startup, it is easier during the CES in Vegas to contact companies that are making efforts to open up to other companies and thus encourage exchanges. The company is also looking for investors to boost their growth.

Activity

Conscience Robotics proposes a ready-to-use system that can be installed easy on any robot: humanoid, flying or wheel-based. This system integrates a unique Artificial Intelligence that allows robots to be fully autonomous and to use their full physical capabilities. Each robot continuously develops and evolves its own solutions: move, activate a light switch, open a door, close a window, bring an object... Those competences, also called «Intelligences», are accessible through the «Conscience Store». So, each user can learn to its robot the wanted Intelligences regarding its needs.

Market

A useful robot at home:

- Your robot is continuously evolving and learning new competences.
- Use the «Distant Reality» Intelligence to control your robot as an avatar from anywhere.
- Use the «Environment» Intelligence to analyze and interact with the environment.
- A lot of incoming «Intelligences» on the Conscience Store.

Robotize your professional activity:

- Increase your business productivity by robotizing parts of your activity.
- We provide you an adapted application regarding your need : Environment analysis and restitution, sequence automation, movement optimization or objects transport.

What do you expect from the Consumer Electronic Show ?

We exhibit for the first time at the CES. The company would like to:

- Highlight products and make robots pre-orders.
- Find partners/customers who would like to robotize and optimize their professional activity.
- Search for funders in order to boost the company.
- Open to the international market with potential foreign customers.
